

MDU – MOBILE DRYER UNIT

- Unique Solution
- International Freight Truck
- Can be deployed mid-well
- Utilized WSM-03 Vertical Dryer
- Built in feed pump and effluent tank
- Explosion proof electronics
- Fast rig-up and rig-down
- Multi-rig discounts
- Great for “slim-hole” operations
- Over 500 wells drilled since 2016
- Average of 700 bbls returned per well
- Reduce haul off and disposal costs
- No trucking required

The MDU is a versatile Mobile Dryer Unit that can be deployed quickly and can be used in many rig up configurations to efficiently recover valuable OBM and reduce haul off and disposal costs greatly. Mounted on an International Freight Truck the WSM-03 vertical dryer is a robust tool that can process cuttings at a continuous rate of over 25 tons per hour. When paired with a high speed centrifuge the MDU has been proven to return an average of 700 bbls of clean mud per well, and reduce haul off. Terra Solutions has extensive experience with the MDU, having used them on over 500 wells since 2016. The only mobile unit in its class, the MDU is designed to use on wells with high ROP as well and “slim hole” wells where traditional dryer systems are ineffective.
